Crack the Code

Briefing:
A crafty thief has broken into the Royal Geographical Society in London and stolen armfuls of priceless maps. Upon investigating the scene, the only clue you’ve recovered was this scrap of paper with a riddle and some odd scribbles of numbers and letters.

The note does not mention any places, but that doesn’t stop you and your partner! You realize the numbers and letters are Latitude and Longitude coordinates to cities where the thief will be stopping. Use Geography Alive pages 554-555 to track the thief. Give the city name where each coordinate takes you. The final clue is in the riddle at the top of the note: First letters from each place-name read; Spell out the city and come with speed! This clue will lead you to the thief and his boss, allowing you to recover the stolen maps and capture those cartographic crooks!

Mission: Crack the code to find out where the thief is taking the stolen maps!

You’ll find the map thief in:

Give the coordinates for the location where you will capture the robbers and reclaim the priceless maps! __________ , __________
